Aim: Using TCP/IP sockets, write a client-server program to make client sending the file name and the server to send back the contents of the requested file if present.

Code:

ServerTCP.py

```
from socket import *
serverName="127.0.0.1"
serverPort = 12000
serverSocket = socket(AF_INET,SOCK_STREAM)
serverSocket.bind((serverName, serverPort))
serverSocket.listen(1)
while 1:
    print ("The server is ready to receive")
    connectionSocket, addr = serverSocket.accept()
    sentence = connectionSocket.recv(1024).decode()
    file=open(sentence,'r')
    l=file.read(1024)
    connectionSocket.send(1.encode())
    print ('\nSent contents of ' + sentence)
    file.close()
    connectionSocket.close()
```

ClientTCP.py

```
from socket import *
serverName = "127.0.0.1"
serverPort = 12000

clientSocket = socket(AF_INET, SOCK_STREAM)
clientSocket.connect((serverName, serverPort))
sentence = input("\nEnter file name: ")
clientSocket.send(sentence.encode())
filecontents = clientSocket.recv(1024).decode()
print ('\nFrom Server:\n')
print(filecontents)
clientSocket.close()
```

Output:

```
♣ ClientTCP.py X
♣ ServerTCP.py
TCP > 🕏 ClientTCP.py >
   1 from socket import *
   2 serverName = "127.0.0.1"
        serverPort = 12000
   5 clientSocket = socket(AF_INET, SOCK_STREAM)
        clientSocket.connect((serverName, serverPort))
       sentence = input("\nEnter file name: ")
clientSocket.send(sentence.encode())
        filecontents = clientSocket.recv(1024).decode()
  10 print ('\nFrom Server:\n')
